

Protecting Your Hands Against Contamination & Reducing Risk of Germ Transmission

According to WHO, results from studies clearly indicate that each year, hundreds of millions of patients are affected by health care associated infections around the world.

Every day, patients get infections in healthcare facilities while they are being treated for something else.

Germs can be spread in healthcare settings from patient to patient on unclean hands of healthcare personnel or through the improper use or reuse of equipment including medical gloves.

One main infection prevention and control measure involves appropriate hand hygiene and practicing the basic precaution of using **medical gloves**.

Quality You Can Believe in because Malaysia Cares

- Over **100 years** of expertise in rubber and commitment to quality
- Established reputation as the **No.1 leader** in **natural rubber latex and nitrile medical gloves**
- **State-of-the-art manufacturing** facilities
- Exported to more than **190 countries**

Made in Malaysia

The global name for **high quality medical gloves** that meet stringent international standards such as the ASTM, ISO and EN.
